

## Week 2 Homework Assignment

Due: April 23, 2014

Create either a Core Bluetooth Central or Core Bluetooth Peripheral app.

If creating a Central app, scan for devices and connect to a specific device. Then read and/or start notifications on a characteristic.

If creating a Peripheral app, create a characteristic and support notifications. Then use something like LightBlue (app from app store) to connect and update your data (as we did in class using the segmented control)
