Homework Week 3

The purpose of this assignment is to demonstrate your understanding of building apps for iPad

•Follow the Human Interface Guidelines when designing your app's UI

Functional Requirements

The app should consist of:

- One master/detail view in which you pass data from the master view, when a table entry is selected and it is displayed in the detail view.
- You must create a data object class (e.g. MyDataObject) and pass that to the detail view
- At least one popover driven by a button somewhere on the detail view
- At least one dialog box driven by a button on the detail view which has:
  - A delegate protocol
  - A delegate implementation in the detail view
  - The delegate implementation should retrieve data from the dialog's view controller before dismissing the dialog.
